

Protecting your business & reputation

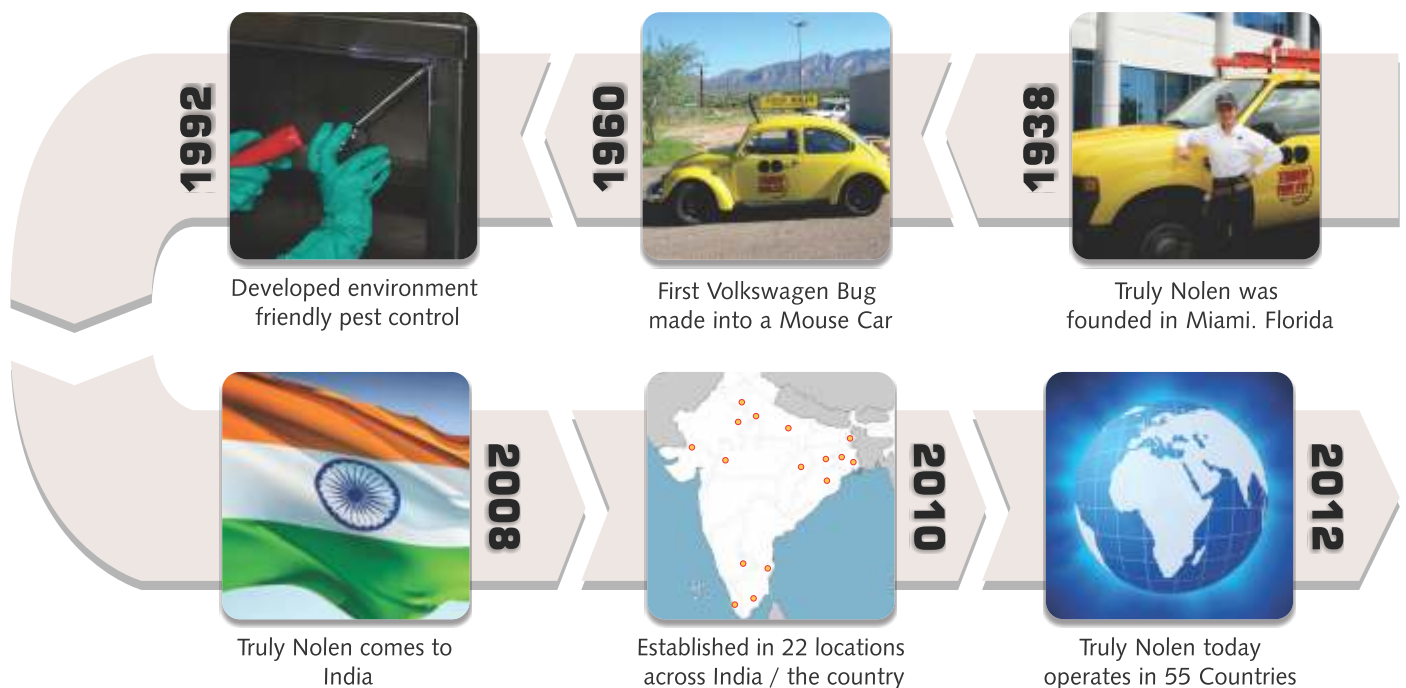

**COMMERCIAL PEST
MANAGEMENT**
DRIVEN BY TEAMWORK AND
INNOVATION

INTRODUCTION

Building pest partnerships since 1938

Truly Nolen is a Pest Management company in association with Truly Nolen International, the Global leader in Pest Management Services. Truly Nolen International was established in 1938 in Miami, Florida. With its specialty lying in commercial Pest management services, truly Nolen believes in spearheading the movement of utilizing traps

and other preventive measures over poisons. Today, Truly Nolen operates in over 53 countries and 5 continents. To better our services for you, we partner with our customers to ensure hassle free service and continually improve our service protocols through training and advanced technology.

The "Green Side of Truly" encompasses the environmentally conscience behaviors of Truly Nolen.

Our mission is to continue to discover and implement new ways to provide the best pest control service without adversely affecting the environment.

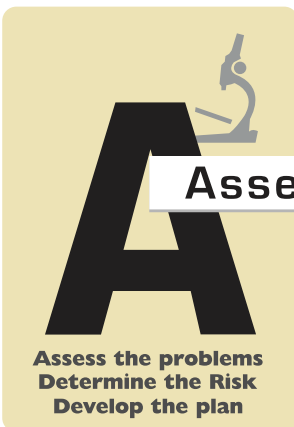

TRULY NOLEN COMMERCIAL PEST CONTROL

Truly Nolen's Four Seasons Protection Plan is a unique solution to the on-going pest problem. Combining the most advanced chemistry and treatments in a season-specific approach, along with a professionally trained staff, we take the battle directly to your location's defensive zones.

The strength behind our Truly Commercial Pest Partnership is people, technology and communication.

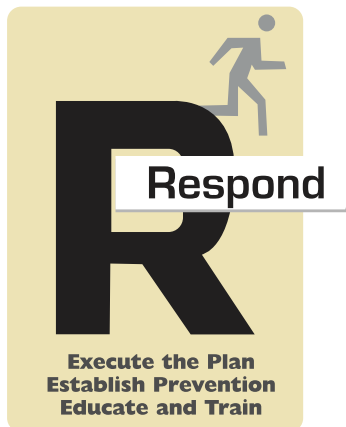

The foundation of our commercial program is a three step monthly service protocol, an I.P.M. (Integrated Pest Management) approach to deal with most crawling insects, like ants, spiders and cockroaches.

SERVICE

Combining our knowledge and experience, we evaluate your pest control situation from all perspectives. The insects you are battling and your environment factors are most important areas of concern, factor into our judgement when developing your custom service plan. Our unique services includes :

Residential Pest Control

Residential pest control technicians are the most commonly seen members of the company equipped for handling most home pests. Our people apply their experience and are committed to solving problems through Research & Development. Our facility consists of laboratory to facilitate R&D Activities.

Termite Protection

Termite protection services employ specialized training in termite and wood destroying organism control techniques. Termite pre-treatment is also performed through these divisions. Truly Nolen can employ additional techniques to mitigate damage or appearance degradation from conventional treatment techniques.

TEAM WORK DRIVING INNOVATION

Making all the difference in the world

We bring together the best people with industry leading technology, research and development. Then we fuel it with a passion to provide the best professional pest control service available.

PEOPLE

Our People make truly nolen. We are committed and passionate in doing what's best for the customer. We have developed and invested in employee programs that extensively affect.

- Hiring
- Training
- Retention
- Advanced Training
- Feedback

PASSION

At Truly Nolen, we are focused on pest control. This is all we do. We are so committed to training that we include even our Training Director to teach and update our Operations Team. We believe it is that important.

We at Truly Nolen are updated with latest information on the latest Pest Management processes and procedures. We incorporate the latest chemicals and technology through intensive and rigorous training taken by the experts from Truly Nolen USA. Moreover, through online training, webex's and regular evaluations, we update every technician on the service procedures. We at Truly Nolen DO NOT DO DIFFERENT THINGS BUT WE DO THINGS DIFFERENTLY.

TECHNOLOGY

Truly Dust Features

- ① Less toxic than common table salt. Its composition is same as that of eye wash and toothpaste
- ① Pest specific making it safe for human ingestion
- ① We use latest gadgets and updated scientific methods for optimum control of pests. We use the ULV machines in sterilization to manage the bacterial and fungal infestations effectively
- ① We also have an in-house R&D that helps us to develop and test latest chemicals and methods for optimum pest control, to measure toxicity and phytotoxicity for any type of commodity

RESEARCH

Our people apply their experience and are committed to solving problems through Research & Development. Our facility consists of laboratory to facilitate R&D Activities.

CERTIFICATION

Truly Nolen dust and chemicals are certified by IPCA, HACCP & AIB.

HOW YOU WILL BE PROTECTED

The right tools make the difference

DUSTER This unique equipment is used only by truly for treating roach in cracks and crevices. Truly dust enables the chemical to reach the smallest crack and crevice for optimum effectivity.

TORNADO MACHINE This machine is used for executing termite treatment in an existing building. It can inject chemicals into the structure by a pin hole and without destroying the structure

POWER SPRAYER This equipment is used for executing termite treatment very fast by injecting chemical with force. With the use of this equipment, the time taken to do the service is reduced drastically.

TRAMEX By using this equipment we can measure moisture content in an existing building structure by which we can plan our treatment. This is specially beneficial for services like termite control and bed bug control.

METAL DETECTOR By using this equipment we can easily and safely detect any concealed electrical wiring, metal, pipeline etc. and safely execute the termite treatment programme in an existing building.

ULV Use of the equipment inside an enclosed area can enable us to make the area free of flying insects for 6-8 hrs.

Rodent	Raw material godown, processing packaging & storage areas	Destroy materials like wires, stationery, machines, etc
	Inside the building or outer periphery	Contaminates food and spread diseases.

The conventional method of termite removal is not enough these days. People find it difficult to manage the treatment procedure. Entry points of termites in a premise are unpredictable but the common way is the soil. If the soil of the area has termites, the premise has the maximum chances to get infested by the termites. Presence of moisture, cellulose and other favourable factors give these termites the best habitat. We cannot remove the favourable factors, for termites survival but we can control this factor like properly cleaning a premise avoiding the timber soil contact, providing proper treatment to the infested and probable infested area.

Total termite control is the most effective, innovative and complete termite protection plan covering both pre construction and post construction. It safeguards your premise from termite by focusing on both the soil and the structure. We diagnose your individual needs and provide a customized solution. TTC is effective against all types of termites like subterranean termite, dry wood termite. Treatment includes walls, windows, doors, plumbing pipes, foundation slabs, wooden furniture etc. Application technology makes the difference. We use eco friendly, odorless products for termite control wood protection.

FIND OUT YOUR RISK
